

S.Y.B.Tech- E & TC Program Structure
Semester III [For Regular Students]

Sr. No.	Course Type	Course Code	Course Name	Teaching Scheme			Credits
				L	T	P	
1	BSC		Ordinary Differential Equations and Multivariate Calculus	2	1	0	3
2	MLC		Professional Laws, Ethics, Values and Harmony	1	0	0	0
3	HSMC		Innovation and Creativity	1	0	0	1
4	SBC		Circuit Simulation Lab	0	0	2	1
5	IFC		Sensors and Automation	1	0	2	2
6	PCC		Electronic Devices and Circuits	3	0	0	3
7	PCC		Digital System Design	3	0	0	3
8	PCC		Signals and Systems	2	1	0	3
9	PCC		Network Synthesis and Analog Filters	3	0	0	3
10	LC		Electronic Devices and Circuits Lab	0	0	2	1
11	LC		Digital System Design Lab	0	0	2	1
12	LC		Network Synthesis and Analog Filters Lab	0	0	2	1
			Total	16	2	10	22

Semester III [For Lateral Entry Students]

Sr. No.	Course Type	Course Code	Course Name	Teaching Scheme			Credits
				L	T	P	
1	BSC		Linear Algebra and Univariate Calculus	4	1	0	5
2	MLC		Professional Laws, Ethics, Values and Harmony	1	0	0	0
3	HSMC		Innovation and Creativity	1	0	0	1
4	SBC		Circuit Simulation Lab	0	0	2	1
5	IFC		Sensors and Automation	1	0	2	2
6	PCC		Electronic Devices and Circuits	3	0	0	3
7	PCC		Digital System Design	3	0	0	3
8	PCC		Signals and Systems	2	1	0	3
9	PCC		Network Synthesis and Analog Filters	3	0	0	3
10	LC		Electronic Devices and Circuits Lab	0	0	2	1
11	LC		Digital System Design Lab	0	0	2	1
12	LC		Network Synthesis and Analog Filters Lab	0	0	2	1
13	BSC		Foundation of Physics	3	0	0	3
			Total	21	2	10	27

Semester IV [For Regular Students]

Sr. No.	Course Type	Course Code	Course Name	Teaching Scheme			Credits
				L	T	P	
1	BSC		Vector Calculus and Partial Differential Equation	2	1	0	3
2	BSC		Biology for Engineers	3	0	0	3
3	SBC		Micro-Project	0	0	2	1
4	IFC		Data Structures	1	1	0	2
5	PCC		Analog Communications Systems	3	0	0	3
6	PCC		Microcontrollers and Applications	3	1	0	4
7	PCC		Integrated Circuits and Applications	3	0	0	3
8	LC		Analog Communications Systems Lab	0	0	2	1
9	LC		Microcontrollers and Applications Lab	0	0	2	1
10	LC		Integrated Circuits and Applications Lab	0	0	2	1
			Total	15	3	8	22

Semester IV [For Lateral Entry Students]

Sr. No.	Course Type	Course Code	Course Name	Teaching Scheme			Credits
				L	T	P	
1	BSC		Multivariate Calculus and Differential Equations	4	1	0	5
2	BSC		Biology for Engineers	3	0	0	3
3	SBC		Micro-Project	0	0	2	1
4	IFC		Data Structures	1	1	0	2
5	PCC		Analog Communications Systems	3	0	0	3
6	PCC		Microcontrollers and Applications	3	1	0	4
7	PCC		Integrated Circuits and Applications	3	0	0	3
8	LC		Analog Communications Systems Lab	0	0	2	1
9	LC		Microcontrollers and Applications Lab	0	0	2	1
10	LC		Integrated Circuits and Applications Lab	0	0	2	1
			Total	17	3	8	24

Semester III

Ordinary Differential Equations and Multivariate Calculus

Teaching Scheme:

Lectures: 2 hrs/week

Tutorial: 1 hr/ week

Examination Scheme:

T1 and T2: 20 marks each

End-Sem Exam: 60 marks

Objectives: Basic necessity for the foundation of Engineering and Technology being mathematics, the main aim is, to teach mathematical methodologies and models, develop mathematical skills and enhance thinking power of students.

Course Outcomes: Students will be able to

1. Know and recall core knowledge of the syllabus. (To measure this outcome, questions may be of the type- define, identify, state, match, list, name etc.)
2. Understand basic concepts. (To measure this outcome, questions may be of the type- explain, describe, illustrate, evaluate, give examples, compute etc.)
3. Analyze the problem and apply the appropriate concept. (To measure this outcome, questions will be based on applications of core concepts)
4. Give reasoning. (To measure this outcome, questions may be of the type- true/false with justification, theoretical fill in the blanks, theoretical problems, prove implications or corollaries of theorems, etc.)
5. Apply core concepts to new situations. (To measure this outcome, some questions will be based on self-study topics and also comprehension of unseen passages.)

Unit I : Review of first order differential equations, Reduction of order, linear differential equations, homogeneous higher order linear differential equations, non-homogeneous higher order linear differential equations with constant coefficients and reducible to differential equations with constant coefficients (method of undetermined coefficients and method of variation of parameters), systems of differential equations, applications to orthogonal trajectories, mass spring systems and electrical circuits. **[11 Hrs]**

Unit II: Laplace Transforms, its properties, Unit step function, Dirac delta functions, Convolution Theorem, periodic functions, solving differential equations using Laplace transform. **[08 Hrs]**

Unit III: Functions of several variables, level curves and level surfaces, partial and directional derivatives, differentiability, chain rule, local extreme values and saddle points, constrained optimization. **[07 Hrs]**

Text Books:

- Thomas' Calculus (14th edition) by Maurice D. Weir, Joel Hass, Frank R. Giordano, Pearson Education.
- Advanced Engineering Mathematics (10th edition) by Erwin Kreyszig, Wiley eastern Ltd.

Reference Books:

- Calculus for Scientists and Engineers by K.D Joshi, CRC Press.
- A Course in Multivariate Calculus and Analysis by Sudhir Ghorpade and Balmohan Limaye, Springer Science and Business Media.
- Differential Equations with Applications and Historical notes by George Simmons, Tata Mc-Graw Hill publishing company Ltd, New Delhi.
- Advanced Engineering Mathematics by C.R. Wylie, McGraw Hill Publications, New Delhi.
- Advanced Engineering Mathematics (7th edition) by Peter V. O' Neil, Thomson.Brooks / Cole, Singapore.
- Advanced Engineering Mathematics (2nd edition) by Michael D. Greenberg, Pearson Education.
- Advanced Engineering Mathematics by Chandrika Prasad and Reena Garg, Khanna Publishing Company Private Limited, New Delhi.

Note: All the Course outcomes 1 to 3 will be judged by 75% of the questions and outcomes 4 and 5 will be judged by 25 % of questions.

Linear Algebra and Univariate Calculus (for Directly Second Year Students)

Teaching Scheme:

Lectures: 4 hrs/week

Tutorial: 1 hr/ week

Examination Scheme:

T1 and T2: 20 marks each

End-Sem Exam: 60 marks

Objectives: Basic necessity for the foundation of Engineering and Technology being mathematics, the main aim is, to teach mathematical methodologies and models, develop mathematical skills and enhance thinking power of students.

Course Outcomes: Students will be able to

1. know and recall core knowledge of the syllabus. (To measure this outcome, questions may be of the type- define, identify, state, match, list, name etc.)
2. understand basic concepts. (To measure this outcome, questions may be of the type- explain, describe, illustrate, evaluate, give examples, compute etc.)
3. analyze the problem and apply the appropriate concept. (To measure this outcome, questions will be based on applications of core concepts)
4. give reasoning. (To measure this outcome, questions may be of the type- true/false with justification, theoretical fill in the blanks, theoretical problems, prove implications or corollaries of theorems, etc.)
5. apply core concepts to new situations. (To measure this outcome, some questions will be based on self-study topics and also comprehension of unseen passages.)

Unit I: Matrices and linear equations: basic properties of matrices, row operations and Gauss elimination, Determinants and their basic properties. Basic concepts in linear algebra: vector spaces, subspaces, linear independence and dependence of vectors, bases, dimensions. Rank of a matrix. Applications to systems of linear equations. **[15 Hrs]**

Unit II: Rank-nullity theorem, Eigen values, Eigen vectors and their basic properties, diagonalization. **[12 Hrs]**

Unit III: Review of limits, continuity and differentiability, Mean value theorems, Taylor's theorem, local extrema, increasing and decreasing functions, concavity, points of inflection. **[12 Hrs]**

Unit IV: Surface area, integrals by special techniques: reduction formulae, arc length, solids of revolution, improper integrals, tests for convergence, Gamma and Beta functions.

[13 Hrs]

Text Books:

- Thomas' Calculus (14th edition) by Maurice D. Weir, Joel Hass, Frank R. Giordano, Pearson Education.
- Advanced Engineering Mathematics (10th edition) by Erwin Kreyszig, Wiley eastern Ltd.

Reference Books :

- Elementary Linear Algebra (10th edition) by Howard Anton and Chris Rorres, John Wiley and sons.
- Calculus for Scientists and Engineers by K.D Joshi, CRC Press.
- A Course in Calculus and Real Analysis (1st edition) by Sudhir Ghorpade and Balmohan Limaye, Springer-Verlag, New York.
- Advanced Engineering Mathematics by C.R. Wylie, McGraw Hill Publications, New Delhi.
- Advanced Engineering Mathematics (7th edition) by Peter V. O' Neil, Thomson.Brooks / Cole, Singapore.
- Differential Calculus by Shanti Narayan, S. Chand and company, New Delhi.
- Applied Mathematics Vol. I (Reprint July 2014) by P.N. Wartikar and J.N. Wartikar, Pune Vidyarthi Griha Prakashan Pune.
- Advanced Engineering Mathematics by Chandrika Prasad and Reena Garg, Khanna Publishing Company Private Limited, New Delhi.

Note: All the Course outcomes 1 to 3 will be judged by 75% of the questions and outcomes 4 and 5 will be judged by 25 % of questions.

Professional Laws, Ethics, Values and Harmony

Teaching Scheme:

Lectures: 1 hrs/week

Examination Scheme:

Total: 100 marks

Continuous Evaluation:
Assignments/ presentations/
Test

Course Outcomes: Students will be able to

- a. Grasp the meaning of the concept – Law
- b. Get an overview of the laws relating to Engineers
- c. Apprehend the importance of being a law abiding person
- d. Self-explore by using different techniques to live in harmony at various levels
- e. Analyze themselves and understand their position with respect to the moral and ethical character needed for a successful and satisfactory work life

Unit 1 (02 hrs)

Concept of Law

Understanding Essentials of a Valid Contract and the basics of contract law protecting rights and obligations

Unit 2 (03 hrs)

Law of Torts

Introduction to the Law of Torts and the basics to protect oneself and the company Law affecting the Workplace Employers Responsibilities / Duties Hiring Practices
Introduction to Intellectual Property Law

Unit 3 (01 hr)

Professional Code of Conduct for Engineers Relationship between Law and Ethics

Unit 4 (02 hrs)

Self Awareness

Understanding oneself and others; Johari Window- Concept, explanation, implementation

Unit 5 (02 hrs)

Needs & Self

Needs and its importance; Understanding harmony and its relevance in actualization at personal and professional levels

Unit 6 (02 hrs)

Ethics and values

Professional ethics and their importance for students; Understanding the importance of values & their application in everyday life

Innovation and Creativity

Teaching Scheme

Lectures: 1 Hr/week

Examination Scheme

"To be declared by the Instructor"

Course Outcomes: At the end of the course, students will demonstrate the ability to:

1. Understand to creativity and innovation terminologies
2. Explore personal and organizational roadblocks in participating in the creative process
3. Apply practical tips to discover the innovative / creative potential within the human being.
4. Study frameworks, strategies, techniques for conceiving ideas.
5. Develop new ways of thinking and Learn the entire innovation cycle.
6. Understand different ways to protect innovation, basics on Patents and process
7. Apply techniques learnt in the course to articulate, refine and pitch a new product or service project

Introduction to concepts of creativity / invention / innovation and their importance in present knowledge world. Components of the creative process, Analogy/model to represent the creative process.

Understanding persons' Creative potential. Blockages in practicing creative process – Mindset and belief systems. Myths and misconceptions about creativity.

Practical Tips to discover and apply one's creative potential, remove blockages, deal with external factors. Importance of synergistically working in a team. Harnessing creativity from nature.

Idea conception, Idea Brainstorming sessions, Idea Evaluation, Protection/Patent review, Principles of innovation, Review of systematic strategies and methods for innovation, Innovation case study, Review of Idea/Prototype /Product and Market Plan.

Applications Exercise / Assignment: at the end of the course, the student will create teams, presents their innovative ideas, and applies their learning in practice.

Circuit Simulation Laboratory

Teaching Scheme

Practical: 2 hrs/week

Examination Scheme

Continuous evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Simulate signals and systems using MATLAB and Simulink
2. Analyze signals with the help of Fourier analysis.
3. Simulate the circuits and analyze the results using Multisim

List of Practicals:

A. Assignments using MATLAB and Simulink

1. Defining and Plotting of standard signals.
2. Sampling of continuous time signals and Aliasing.
3. Fourier Series analysis of periodic signals.
4. Fourier Transform analysis of aperiodic signals.
5. Circuit Analysis using KVL,KCL
6. Verification of Maximum power transfer theorem.
7. Realization of AM,DSBFC,DSBSC building blocks using Simulink.

B. Assignment using Multisim

1. Simulation of inverting, non-inverting, voltage follower circuits using opamp.
2. Simulation of regulated power supply.
3. Simulation of Digital circuits.
4. Simulation of Data Acquisition System.

IFC I Sensors and Automation

Teaching Scheme

Lectures: 1 hrs/week

Practical: 2 Hrs/ week

Examination Scheme

T1 and T2: 20 marks

End Sem: 100 marks

Course Outcomes: At the end of the course, students will be able to

1. Interpret the characteristics of the transducers/sensors
2. Select transducers/sensors for specific applications
3. Understanding of working principle of Programmable Logic Controller (PLC) and Distributed Control Systems
4. Understanding the concept of Industrial Automation

Unit 1 Basics of Sensors

[07 Hrs]

Concepts and terminology of transducer, sensor, sensor classifications and characteristics (Static and dynamic), Working principle, characterization and applications of: strain gauges, LVDT, capacitive, RTD, thermocouple, thermistor, Solid-State, pressure, optical, chemical sensors, integration of sensors for IOT and Industry 4.0 applications.

Unit 2 Industrial automation

[07 Hrs]

Industrial Automation: concept, automation components, necessity and working principle, block schematic of Programmable Logic Controller (PLC). Input & Output modules (AI, DI, AO, DO), Introduction to Ladder Programming, introduction to Distributed Control Systems (DCS). Industrial automation leads to Industrial IOT and Industry 4.0.

List of Practicals:

1. Case study /Characterization of RTD/semiconductor Temp IC
2. Characterization of level sensors
3. Characterization of strain gauge/ Displacement measurement using LVDT/ Encoders
4. Characterization of PH, Conductivity, color sensor
5. Introduction to PLC programming languages (ladder programming)
6. Ladder Programming for relay, coil, On/OFF, Sequencing of motors,

7. Ladder Programming with Timers/Counters

8. Ladder Programming for Pick and Place type of robotics application

Text Books:

- B. C. Nakra and K. K. Choudhari, "Instrumentation Measurements and Analysis" by, Tata McGraw Hill Education, Second ed., 2004.
- C.D. Johnson, " Process Control Instrumentation Technology" by, Pearson Education Limited , eighth ed., 2014

Electronic Devices and Circuits

Teaching Scheme:

Lectures: 3 hrs/week

Examination Scheme:

T1 and T2-20 marks each

End-Sem Exam: 60 marks

Course outcomes:

At the end of this course students will demonstrate the ability to

1. Analyze different types of semiconductor devices, their operation and characteristics.
2. Design and analyze the DC bias circuitry of BJT and FET.
3. Analyze and model BJT and FET for small signal.
4. Apply concept of feedback to improve stability of circuits.
5. Design circuits using the transistors and oscillators.

Unit 1

Transistors: - BJT - structure, operation, characteristics and Biasing BJT structure, Symbol, Basic operation. Input and Output Characteristics in CE, CB and CC configuration, Comparison of transistor configurations. BJT biasing, Stability factor. Ratings and specifications of BJT from data sheet. [06 Hrs]

Unit 2

Transistors: JFET, MOSFET- structure, operation, characteristics and Biasing JFET: - Structure, Symbol, Basic operation, Drain and Transfer Characteristics (Shockley's Equation). Biasing arrangements for JFET, Biasing against device variation, biasing for zero current drift. Universal JFET bias curve, Ratings and specifications of JFET from data sheet MOSFET: - Structure, Symbol, Basic operation, Drain and Transfer Characteristics. Non ideal voltage-current characteristics viz. Finite output resistance, body effect, sub threshold conduction, breakdown effects and temperature effects. MOSFET Biasing. N-MOS, P-MOS

and CMOS devices. Handling precautions for CMOS devices. Comparison of BJT and FET. [8 Hrs]

Unit 3

Single Stage Amplifiers BJT small signal model – Analysis of CE, CB, CC amplifiers, FET small signal model– Analysis of CS, CG and CD amplifiers. Concept of frequency response, Square wave testing of amplifiers, Miller’s theorem, Effect of coupling, bypass, junction and stray capacitances on frequency response for BJT and FET amplifiers. [08 Hrs]

Unit 4

Multistage Amplifiers Need for multistage amplifiers, block diagram, selection of configurations in multistage amplifiers, analysis 35 of multistage amplifier. [05 Hrs]

Unit 5

Power Amplifiers Classes of power amplifiers – Class A, Class B, Class AB, Class C and Class D amplifiers, Analysis of Class A, Class B, Class AB amplifiers, Distortions in amplifiers, concept of Total Harmonic Distortion (THD), Comparison of power amplifiers [05 Hrs]

Unit 6

Feedback Amplifiers and Oscillators Feedback Amplifiers: - Feedback Concept, Classification of amplifiers based on feedback topology, (Voltage, Current, Transconductance and Transresistance amplifiers), Effect of negative feedback on various performance parameters of an amplifier, Analysis of one circuit for each feedback topology. Oscillators: - Condition for oscillations, phase shift – Wien bridge, Hartley, Colpitts and Crystal oscillator. [08 Hrs]

Text Books:

- Millman & Halkies, “Electronic Device and Circuits”, Second Edition, Tata McGraw Hill.
- Boylestead & Nashelsky, “Electronic devices and Circuits Theory” Eighth edition, PHI

Reference Books:

- Millman Halkies, “Integrated Electronics”, Tata McGraw Hill.
- David A. Bell,” Electronic Device and Circuits”, Fourth Edition, PHI.
- Floyd,” Electronic Devices”, Seventh Edition, Pearson.

Digital System Design

Teaching Scheme:

Lectures: 3 hrs/week

Examination Scheme:

T1 and T2-20 marks each

End-Sem Exam: 60 marks

Course outcomes:

At the end of this course students will demonstrate the ability to

1. Design & analyze combinational logic circuits using basic, Universal and derived gates

2. Design & analyze modular combinational circuits with MSI devices like MUX/DEMUX, Decoder, Encoder etc
3. Design & analyze synchronous sequential logic circuits with FFs and combinatorial circuit
4. Use HDL & appropriate EDA tool for logic design and simulation

Unit 1

Logic Simplification and Combinational Logic Design: Review of Boolean Algebra and De Morgan's Theorem, SOP & POS forms, Canonical forms, Karnaugh maps up to 6 variables, Binary codes, Code Conversion. [06 Hrs]

Unit 2

MSI devices like Multiplexers, Encoder, Decoder, Comparators, Half and Full Adders, Subtractors, Serial and Parallel Adders, BCD Adder, Barrel shifter and ALU [06 Hrs]

Unit 3

Sequential Logic Design: Building blocks like S-R, JK and D latch, Master-Slave JK FF, Edge triggered FF, Ripple and Synchronous counters, Shift registers, Finite state machines, Design of synchronous FSM, Designing synchronous circuits like Pulse train generator [08 Hrs]

Unit 4

Logic Families and Semiconductor Memories: TTL NAND gate, Specifications, Noise margin, Propagation delay, fan-in, fan-out, Tristate TTL, ECL, CMOS families and their interfacing, Memory elements, Concept of PLDs like PAL, PLA, CPLDs, FPGA etc. Logic implementation using Programmable Devices (ROM, PLA) [08 Hrs]

Unit 5

VLSI Design flow: Design entry: Schematic, FSM & HDL, different modeling styles in VHDL, Data types and objects, Dataflow, Behavioral and Structural Modeling, Synthesis and Simulation [08 Hrs]

Unit 6

VHDL constructs and codes for combinational and sequential Circuits [04 Hrs]

Text Books:

- R.P. Jain, "Modern digital Electronics", Tata McGraw Hill, fourth edition
- Douglas Perry, "VHDL programming", McGraw Hill, fourth edition

Reference Books:

- Stephen Brown and Zvonko Vranesic, “Fundamentals of Digital Logic with VHDL Design” McGraw Hill, Third edition
- M. Morris Mano, Michael D. Ciletti, “Digital Design” Pearson, Fourth edition
- A. Anand Kumar, “Fundamentals of Digital circuits”, PHI, Fourth edition
- Charles Roth, “Digital System Design using VHDL”, Tata McGraw Hill

Signals and Systems

Teaching Scheme:

Lectures: 2 hrs/week

Tutorial: 1 Hr/ week

Examination Scheme:

T1 & T2: 20 marks each

End-Sem Exam: 60 marks

Course outcomes:

At the end of this course students will demonstrate the ability to

1. Understand classification of signals and systems and interpret time domain response of LTI systems.
2. Analyze the spectral properties of signals using Fourier analysis.
3. Apply Z- transform to study discrete-time signals and systems.

Unit 1

Introduction and Classification of Signals and Systems, Elementary Operations on Signals, Properties of System. [04 Hrs]

Unit 2

Time Domain Representations of Linear Time Invariant (LTI) Systems, Impulse Response, Convolution, Differential and Difference Equation Representation, Block Diagram and State Variable Representation of the System. [05 hrs]

Unit 3

Fourier Representation of the Signals: Signal Analysis - Discrete and Continuous, Periodic and Non-Periodic, and Synthesis in Fourier Domain, Properties of Fourier Representations, Application of Fourier Representations. [05 hrs]

Unit 4

Representation of Signals Using Discrete-Time Complex Exponentials: Z-Transform, Significance and Properties of Region of Convergence, Properties of Z-Transform, Inverse Z-Transform, Analysis of Linear Time Invariant (LTI) System, Computational Structures for Implementing Discrete Time Systems. [05 hrs]

Unit 5

Study of Systems with Differential and Difference Equations, Transfer Function, Poles and Zeros, Stability Consideration in Z Domain. [06 Hrs]

Text Books:

- Simon Haykins and Barry Van Veen, "Signals and Systems", John Wiley and sons.
- B. P. Lathi, "Linear Systems and Signals", OXFORD University Press.

Reference Books:

- Alan V. Oppenheim, Alan S. Willsky with IAN T. Young, "Signals and Systems", Prentice-Hall.
- S.S. Soliman & M.D. Srinath, "Continuous and Discrete Signals and System"s, Prentice- Hall, 1990
- Shaila Dinkar Apte "Signals and Systems: Principles and Applications", Cambridge University Press.

Network Synthesis and Analog Filters**Teaching Scheme:**

Lectures: 3 hrs/week

Examination Scheme:

T1 and T2: 20 marks each
End-Sem Exam: 60 marks

Course outcomes:

At the end of this course students will demonstrate the ability to

1. Analyze electrical networks in the Laplace domain and to understand concepts of network functions, poles and zeroes of network functions and their stability.
2. Evaluate two port parameters of a two-port network.
3. Synthesize a network using passive elements, given the driving point immittance function or transfer function.
4. Design analog active and passive filters.

Unit 1

Laplace Transform, Concept of Poles-Zeros, Pole -Zero plot, Stability, Network functions. Analysis of circuit in s domain, analysis of ladder networks. [05 Hrs]

Unit 2

Over view of Attenuators, Two port parameters, Relationships between two port parameters, transfer function using two port parameters, interconnection of two-ports. [07 Hrs]

Unit 3

Realizability theory and synthesis of one-port networks: Causality & stability, Hurwitz polynomials, positive real functions, elementary synthesis procedures, properties & synthesis of L-C, R-C, & R-L one port circuits, synthesis of certain R-L-C functions. [08 Hrs]

Unit 4

Synthesis of two-port networks: Properties of transfer functions, zeros of transmission, synthesis of Y_{21} & Z_{21} with a 1Ω termination, synthesis of constant resistance networks,

Impedance and Frequency Denormalization to required values. [08 Hrs]

Unit 5

Aspects of filter design problem, approximation problem in network theory, maximally flat low pass filter approximation (Butterworth), Chebyshev approximations. [07 Hrs]

Unit 6

Synthesis of Active filters: Low Pass, Band Pass, RC-CR Transformation, Sensitivity, Biquad Circuits. [05 Hrs]

Text Books:

- Franklin Kuo, "Network Analysis & Synthesis", Wiley International, 2nd Edition.
- Govind Daryanani, "Analysis and Synthesis of Filters", 2nd Edition.

Reference Books:

- Kendall Su, "Analog Filters", Kluwer Academic Publisher, 2nd Edition, 2002.
- John O' Malley, "Basic Circuit Analysis", Schaum's series, 4th Edition
- Van Valkenberg, "Network Analysis", Pearson Education, 2nd Edition

Electronic Devices and Circuits Laboratory

Teaching Scheme:

Practical: 2 hrs/week

Examination Scheme:

Continuous Evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Identify and characterize basic devices such as BJT and FET from their package information by referring to manufacturers' data sheets.
2. Design, Build, Test and Analyze performance of Linear Applications of abovementioned active devices using equipment set-up like Power Supply, Signal generators, Oscilloscope.
3. Simulate a few of the circuit applications using appropriate Circuit Simulation package.

List of Experiments:

1. Input and Output Characteristics of BJT in CE configuration. (Find h parameters from characteristics.)
2. Transfer and Drain Characteristics of JFET. (Find g_m , r_d and μ from characteristics.)
3. Single stage JFET CS amplifier. (Find performance parameters - A_v , R_i , R_o & Bandwidth for JFET CS amplifier.)
4. Single stage BJT CE amplifier. (Find performance parameters - A_v , R_i , R_o & Bandwidth for BJT CE amplifier.)

5. Comparison of CE, CC, CB configurations for Av, Ri, Ro.
6. Simulate frequency response of single stage BJT CE / FET CS amplifier. (Effect of coupling and bypass capacitors.)
7. Design and simulate Power Amplifiers - Class A, Class AB complementary symmetry. (Efficiency calculations and comparison.)
8. Design and simulate Voltage Shunt Feedback Amplifiers. (Compare performance of voltage shunt circuit under with and without feedback conditions.)
9. Design and simulate current series Feedback Amplifiers. (Compare performance of current series circuit under with and without feedback conditions.)
10. Design and simulate LC and RC oscillators. (Compare practical and theoretical oscillation frequency.)
11. Build and test LC or RC oscillator.

Digital System Design Laboratory

Teaching Scheme:

Practical: 2 hrs/week

Examination Scheme:

Continuous Evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Design, simulate, built and debug complex combinational and sequential circuits based on an abstract functional specification
2. Develop and simulate VHDL architectural representations of systems and components using structure, behavior, or data flow concepts

List of Practical:

1. Simplification and implementation of a Boolean function using k-map technique e.g. code converter
2. Binary and BCD adders and Subtractor using IC 7483 and gates
3. Comparator using IC 7485 and Parity generator and checker using X-OR gate
4. Use of Multiplexers, Encoders, Demultiplexer and decoders for implementing logic
5. Counters
 - a. Design and implementation of ripple and synchronous counters using JK and D FF and additional gates
 - b. Design of counter using ICs like 7490/93 (ripple) and 74192/193(synchronous)
6. Design and implementations of random sequence counter using D FF or JK FF ICs
7. Study of shift registers IC 7495 for different modes. Design of pulse train generator, ring counter and Johnson's counter using shift register and decoder circuit
8. Understanding VLSI Design flow using EDA tools
9. Writing VHDL codes of simple combinational and sequential circuits, Simulation and

- synthesis of the written codes using the EDA tool
10. Study of characteristics of typical TTL and CMOS IC's like fan out, noise margin, propagation delay

Network Synthesis and Analog Filters Laboratory

Teaching Scheme

Practical: 2 hrs/week

Examination Scheme

Continuous Evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Verify network theorems
2. Evaluate two port parameters for a particular two port network
3. Design various types of attenuator circuits
4. Design active and passive filters with the given specifications

List of Practical:

1. Verification of Network theorems (Superposition, Thevenin's, Nortons, Reciprocity, Maximum Power Transfer)
2. Two-port network parameters: Determination of z, y, h, T parameters
3. Attenuators: T –type, Ladder, Lattice type attenuators.
4. Passive filters I: Low-pass & high-pass filter.
5. Passive Filters-II: Band-pass & Band-stop filter.
6. Active filters I: Low-pass & high-pass filter. (1st order and 2nd order)
7. Active Filters-II: Band-pass & Band-stop filter. (1st order and 2nd order)

Foundation of Physics (For Direct Second Year Students)

Teaching Scheme

Lectures : 3hrs/week

Examination Scheme

Test1: 20 & Test2: 20 marks

End-Sem Exam- 60

Course Outcome:

Students will be able to

1. Understand classical and wave mechanics to implement for the problems.
2. Understand of the laws of thermodynamics to implement in various thermodynamic systems and processes.
3. Understand the basic principles of Electromagnetism and formulate it to solve the engineering problems.
4. Aware of limits of classical physics and will be able to use it in the appropriate field in order to solve the problems.

Unit 1

[7 Hrs]

Oscillations, Waves & Light

SHM, characteristics of SHM, Waves, Travelling waves and its equation, Types of waves, Principle of Superposition, Stationary waves, Light as an EM Wave, graphical representation of EM wave, Interference of light due to thin film (uniform thickness), Antireflection coating, Total Internal reflection, Introduction to Optical fiber and its design.

Unit 2

[7 Hrs]

Atomic Nucleus and Nuclear energy

Atomic Nucleus, Nuclear force, Static properties of nucleus, Mass defect and Binding energy, Law of radioactive decay, Half-life, Applications of radioactivity, Nuclear reactions, Q-value of nuclear reaction, Nuclear fission, chain reaction and Nuclear energy.

Unit 3

[7 Hrs]

Electrostatics

Coulomb's law in vector form, the electric field, Continuous charge distribution (Line, Surface & Volume), Divergence of E, application of Gauss's law (simple 2 D problems), The curl of E (Faraday's Law), the concept of electric potential V, Potential due to continuous charge distribution.

Unit 4

[7 Hrs]

Magneto statics

Steady state current (line current, Surface current and volume current), current densities, Magnetic field due to steady current (Biot-Savart's law), divergence and curl of B, Statement of Ampere's Law (with simple examples).

Unit 5**[7 Hrs]****Elements of Thermodynamics**

Concept of Temperature, Terminology in Thermodynamics, Thermodynamic work, Comparison for Heat and Work, First Law and its applications, Heat engine and Thermal efficiency, Second law, Entropy, Disorder of system, Third law and Principle of Unattainability Absolute Zero (Nernst's Theorem).

Unit 6**[7 Hrs]****Modern physics**

Drawbacks of Classical Mechanics, Plank's quantum hypothesis, Dual nature of matter, De-Broglie's hypothesis, light as a particle(Compton's experiment), De-Broglie's wavelength, Heisenberg's uncertainty principle(position and momentum), Wave function, its properties, conditions and its physical significance, Free particle solution of wave function.

Semester IV

Vector Calculus and Partial Differential Equations

Teaching Scheme

Lectures : 2 hrs / week

Tutorials : 1 hr / week

Examination Scheme

Internal Test 1: 20 marks

Internal Test 2: 20 marks

End Sem. Exam: 60 marks

Objective: Basic necessity for the foundation of Engineering and Technology being mathematics, the main aim is, to teach mathematical methodologies and models, develop mathematical skills and enhance thinking power of students.

Outcomes: Students will be able to

1. know and recall core knowledge of the syllabus. (To measure this outcome, questions may be of the type- define, identify, state, match, list, name etc.)
2. understand basic concepts. (To measure this outcome, questions may be of the type- explain, describe, illustrate, evaluate, give examples, compute etc.)
3. analyze the problem and apply the appropriate concept. (To measure this outcome, questions will be based on applications of core concepts)
4. give reasoning. (To measure this outcome, questions may be of the type- true/false with justification, theoretical fill in the blanks, theoretical problems, prove implications or corollaries of theorems, etc.)
5. apply core concepts to new situations. (To measure this outcome, some questions will be based on self-study topics and also comprehension of unseen passages.)

Unit I: Double integrals in Cartesian and polar co-ordinates, iterated integrals, change of variables, triple integrals in Cartesian, spherical and cylindrical co-ordinates, substitutions in multiple integrals, Applications to Area, Volume, Moments and Center of Mass.

[10 Hrs]

Unit II: Vector differentiation, gradient, divergence and curl, line and surface integrals, path independence, statements and illustrations of theorems of Green, Stokes and Gauss, arc length parameterization, applications.

[07 Hrs]

Unit III: Partial differential equations with separation of variables, boundary value problems: vibrations of a string, heat equation, potential equation, vibrations of circular membranes.

Text Books :

- Thomas' Calculus (14th edition) by Maurice D. Weir, Joel Hass, Frank R. Giordano, Pearson Education.
- Advanced Engineering Mathematics (10th edition) by Erwin Kreyszig, Wiley eastern Ltd.

Reference Books :

- Advanced Engineering Mathematics by C.R. Wylie, McGraw Hill Publications, New Delhi.
- Functions of several variables by Wendell Fleming, Springer-Verlag, New York.
- Partial Differential Equations (4th edition) by Fritz John, Springer.
- Advanced Engineering Mathematics (7th edition) by Peter V. O' Neil, Thomson.Brooks / Cole, Singapore.
- Advanced Engineering Mathematics (2nd edition) by Michael D. Greenberg, Pearson Education.
- Advanced Engineering Mathematics by Chandrika Prasad and Reena Garg, Khanna Publishing Company Private Limited, New Delhi.

Note : All the Course outcomes 1 to 3 will be judged by 75% of the questions and outcomes 4 and 5 will be judged by 25 % of questions.

Multivariate Calculus and Differential Equations (for Direct Second Year Students)

Teaching Scheme

Lectures : 4 hrs / week
Tutorials : 1 hr / week

Examination Scheme

Internal Test 1: 20 marks
Internal Test 2: 20 marks
End Sem. Exam: 60 marks

Objectives: Basic necessity for the foundation of Engineering and Technology being mathematics, the main aim is, to teach mathematical methodologies and models, develop mathematical skills and enhance thinking power of students.

Course Outcomes: Students will be able to

1. know and recall core knowledge of the syllabus. (To measure this outcome, questions may be of the type- define, identify, state, match, list, name etc.)
2. understand basic concepts. (To measure this outcome, questions may be of the type- explain, describe, illustrate, evaluate, give examples, compute etc.)
3. analyze the problem and apply the appropriate concept. (To measure this outcome, questions will be based on applications of core concepts)
4. give reasoning. (To measure this outcome, questions may be of the type- true/false with justification, theoretical fill in the blanks, theoretical problems, prove implications or corollaries of theorems, etc.)
5. apply core concepts to new situations. (To measure this outcome, some questions will be based on self-study topics and also comprehension of unseen passages.)

Unit I: Review of first order differential equations, linear differential equations, homogeneous higher order linear differential equations, non-homogeneous higher order linear differential equations with constant coefficients (method of undetermined coefficients and method of variation of parameters). **[09 Hrs]**

Unit II: Laplace Transforms, its properties, Unit step function, Dirac delta functions, Convolution Theorem, periodic functions, solving differential equations using Laplace transform. **[07 Hrs]**

Unit III : Functions of several variables, level curves and level surfaces, partial and directional derivatives, differentiability, chain rule, local extreme values and saddle points. **[07 Hrs]**

Unit IV : Double integrals in Cartesian and polar co-ordinates, iterated integrals, change of variables, triple integrals in Cartesian, spherical and cylindrical co-ordinates.

[12 Hrs]

Unit V : Vector differentiation, gradient, divergence and curl, line and surface integrals, path independence, statements and illustrations of theorems of Green, Stokes and Gauss.

[10 Hrs]

Unit VI : Partial differential equations with separation of variables, boundary value problems: vibrations of a string, one dimensional heat equation.

[07Hrs]

Text Books :

Note: All the Course outcomes 1 to 3 will be judged by 75% of the questions and outcomes 4 and 5 will be judged by 25 % of questions.

Biology For Engineers

Teaching Scheme

Lectures: 3 hrs / week

Examination Scheme

Test 1: 20 marks

Test 2: 20 marks

ESE: 60 marks

Course Outcomes:

Students will be able to

- Understand basic biological principles and organizational structure of living systems at molecular level comprehend basic biological principles and organizational structure of living systems at cellular level
- Know Energy transformations and information processing in biological systems
- Appreciate biological process with engineering perspective
- Impart knowledge about the common corridors of biology and engineering and biologically inspired technologies

Unit 1:

(06Hrs)

Biomolecules and biopolymers: Structure and Function

Organic and inorganic molecules; Unique Properties of water, Vitamins and Minerals, Carbohydrates, Lipids, Amino Acids and proteins, Nucleic Acids (DNA and RNA)

Unit 2 :

(06Hrs)

Levels of organization of life: Cell as a basic unit of life, prokaryotic and eukaryotic cells, microbes, plant and animal cells; Cell organelles – structure and function; Cell membrane

Levels of organization: cells, tissues, organs, systems & organism

Unit 3:

(06Hrs)

Energy transformations in Chloroplast: Photosynthesis (photochemical & biochemical phase) and ATP generation, Aerobic and anaerobic systems

Energy transformations in Mitochondria: Cellular respiration (glycolysis and Krebs cycle) and ATP generation

Bioenergetics: Thermodynamic principles applied to biology, negative entropy changes in biological systems, Free Energy, Chemical Equilibrium

Unit 4:

(06Hrs)

Expression and Transmission of Genetic Information: DNA replication, Enzyme driven process of DNA cloning, Protein synthesis- Transcription & translation

Techniques for optimization:

- At molecular level: Recombinant DNA Technology, DNA hybridization, PCR, DNA

microarray

Unit 5: (06Hrs)

Transport Phenomena in Biological Systems: Membrane channels and ion channels; Fluid flow and mass transfer (nutrients & ions); In plants: Xylem and Phloem; In animals: Blood and Lymph Transport of gases: Oxygen and Carbon dioxide Heat Transport - Body temperature regulation.

Communication: Cell junctions, Cell-cell communications – cell signaling, Hormones, Pheromones and cell behavior

Defense mechanisms:

In plants: Herbivory, secondary metabolites

In animals: Innate and Adaptive immune systems

Unit 6: (06Hrs)

Engineering perspectives of biological sciences:

Biology and engineering

crosstalk – At cell level:

Hybridoma technology

At tissue level: Plant Tissue Culture, Animal Tissue Culture;

Tissue Engineering: Principles, methods and applications

Introduction to Biomimetics and Biomimicry,
nanobiotechnology

Table 1.1: For Teachers: Additional topics to be discussed with students in accordance with relevant biological topics (in branch-wise manner)

Disease/ Disorder	Physiology	Diagnosis	Therapeutics		Medical procedure
			Biomaterials	Instrumentation	
Cardiovascular disease	Heart – electrical stimulation and mechanical pumping	ECG, Angiography	Stentsfor angioplasty	Heart lung machines	Angioplasty, By-pass surgery
Bone/skull Injuries	Biomechanics of musculo- skeletal system	Medical imaging technologies Arthroscopy	Prosthetics	Arthroscope Biomechanics Prosthetics	Joint replacement Total hip Replacement reh abilitation engg
Kidney disorders	Functioning of Kidney	Medical imaging technologies	Filtration membranes	Dialyser	Dialysis

Micro Project

Teaching Scheme:

Practical: 2 hrs/week

Examination Scheme:

Continuous evaluation: 40 marks

Exam: 60 Marks

Course Outcomes: At the end of the course, students will demonstrate the ability to:

1. Identify and define a problem statement from the requirements raised from literature survey /need analysis.
2. Build and Test electronic circuits/prototype for developing real life small electronic applications.
3. Demonstrate the ability to work in teams, write comprehensive report and effective presentation of micro project work

The micro-project is a team activity having 3-4 students in a team. This is electronic circuit building and testing for developing real life small electronic applications. The micro-project may be a complete hardware or hardware with small programming aspect. It should encompass electronics components, devices, analog or digital ICs, micro controller etc. Micro- Project should cater to a small system required in laboratory or real life application. After interactions with course coordinator and based on comprehensive literature survey/ need analysis, the student shall identify the title and define the aim and objectives of Micro-project. Student is expected to detail out circuit specifications, resources required, critical issues involved in implementation and submit the proposal within first week of the semester.

The student is expected to build and test the proposed work in PCB fabrication Lab. The Lab sessions should be used for discussion on standard practice used for electronic circuit development, PCB design using suitable simulation software, others aspects of the circuit development, and guidelines for documentation /report writing. Completed micro-project and documentation in the form of micro- project report is to be submitted at the end of semester.

IFC II Data Structures

Teaching Scheme

Lectures: 1 Hr / Week

Tutorial: 1 Hr/ Week

Examination Scheme

Assignment/Quizzes : 40 marks

End Semester Exam : 60 marks

Course Outcomes

Students will be able to

1. Define a data structure for a given real life data
2. Illustrate the difference between the abstract data structure definition and its implementation
3. Implement operations on linked lists, stack and queue
4. Demonstrate with diagrams, operations on binary trees.
5. Implement a few simple real life applications such as matrix operations, processing students' data, etc.

Course Contents

Introduction to imperative programming : Basic syntax of languages like C or C++: Data types, variables, limitations of data types, control statements, functions, compilation and execution as independent steps, global, static, local variables, structures, user defined types, pointer, recursion.

[2 Hrs]

Arrays, Searching and Sorting: Searching: linear and binary search algorithm, sorting techniques such as insertion sort, bubble sort, selection sort, merge sort and quick sort

[3 Hrs]

Linked Lists: Implementation of singly linked list, doubly linked list, circular list (implementation should have operations such creation of list, deletion of entire list, insertion to and deletion from arbitrary positions, traversal etc) using pointers

[2 Hrs]

Stack and Queue: Abstract definitions of stack and queue, implementations using pointers and arrays, applications of stack (e.g. expression evaluation), applications of queue (e.g. allocation of CPU in FCFS algorithm)

[3 Hrs]

Trees: Binary tree, Binary search tree, traversal operations on binary tree

[2 Hrs]

File Handling: Working with text files and binary files, a simple application using files

[2 Hrs]

Suggested List of Assignments:

1. A few practice programming problems can be given in C / C++ like: Perform arithmetic/logical/relational operations, Fibonacci Series, Operations on Strings etc.
2. Finding maximum/minimum number of an array
3. Linear search and binary search in sorted array
4. Matrix addition, Matrix multiplication
5. Sorting integers using insertion sort, bubble sort, selection sort, merge sort, quick sort
6. Implementation of singly linked list, doubly linked list and circular list using pointers (the implementation should support the standard operations associated with each type of the list)
7. Linked implementation of stack
8. Array implementation of stack
9. Linked implementation of queue
10. Array implementation of queue
11. Binary search tree implementation using pointers
12. DFS and BFS of a binary tree
13. Creating a file containing student data (roll no, name, marks etc), processing the data in memory (assuming the entire file contents fit in memory) and creating output file using the processed data

Analog Communication Systems

Teaching Scheme:

Lectures: 3 hrs/week

Examination Scheme:

T1 and T2-20 marks each

End-Sem Exam: 60 marks

Course Outcomes:

At the end of this course, the students should be able to

1. Analyze different components of analog communication systems such as

- modulator, demodulator, mixer, receiver, etc. in time and frequency domain.
2. Compare analog communication systems on the basis of bandwidth, power requirement and the performance in the presence of noise.
 3. Design the modulators, demodulators for amplitude and frequency modulated systems.

Unit 1

Introduction

Overview: Elements of a Communication System, Classification of electronic communication systems, Baseband and bandpass signals, Need for modulation, Types of analog modulation. Concept and types of multiplexing. [04 Hrs]

Unit 2

Amplitude modulation

DSB-FC, DSB-SC, SSB, VSB and ISB transmissions: mathematical Analysis-time and frequency domain analysis, modulation index, generation and detection methods, power requirement of these systems, Comparison of AM modulation schemes, Quadrature Carrier Multiplexing(QAM), frequency division multiplexing. [10 Hrs]

Unit 3

Angle Modulation

Frequency Modulation (FM), Single Tone Frequency Modulation, Spectrum Analysis, Narrowband FM, Wideband FM, Transmission Bandwidth of FM Waves, Generation of FM waves: Direct and Indirect Methods, Demodulation of FM, Phase Locked Loops, Limiting of FM waves, comparison between AM & FM, Phase Modulation, Relation between FM and PM. [10 Hrs]

Unit 4

Radio Receivers and performance in the noise

Basic receiver (TRF), Super heterodyne receiver for AM and FM, performance parameters for receiver such as sensitivity, selectivity, fidelity, image frequency rejection etc., AGC technique, Sources of noise, Types of noise, Signal to Noise Ratios, Noise factor, Noise Temperature. Noise in AM, Pre emphasis and De-emphasis in FM, Comparison of Noise Performance of different modulation schemes. [07 Hrs]

Unit 5

Pulse Analog Modulation

Band limited & time limited signals, Narrowband signals and systems, Sampling theorem in time domain, Nyquist criteria, Types of sampling- ideal, natural, flat top, Aliasing & Aperture effect. PAM PWM & PPM. [06 Hrs]

Unit 6

Applications of AM and FM

AM Radio, Television: Video Bandwidth, Choice of Modulation, Colour Television, HDTV, FM Radio, FM Stereo Multiplexing. [03 Hrs]

Text Books:

- B.P. Lathi, "Communication Systems", BS publications.
- George Kennedy, "Electronic Communications", McGraw Hill Kennedy.

Reference Books:

- Simon Haykin, "An introduction to analog & digital communications", John Wiley & Sons
- Roddy and Coolen, "Electronic Communication Systems", Pearson Education.
- Frank R. Dungan, "Electronic Communication Systems", Delmar Publishers.

Micro-controllers and Applications

Teaching Scheme:

Lectures: 3 hrs/week

Tutorial: 1 hr/week

Examination Scheme:

T1 and T2-20 marks each

End-Sem Exam: 60 marks

Course outcomes:

At the end of this course students will demonstrate the ability to

1. Analyze the internal architecture of 8-bit and 16-bit Microcontrollers
2. Apply the knowledge to interface and program different peripherals to the microcontroller
3. Understand the concept of embedded systems

Unit I

8051 Processor Architecture , signals and Instruction Set: The CPU, addressing modes, internal and external memory addressing, interrupt handling, Instruction execution, Instruction set – data transfer, arithmetic and logical instructions, bit operators, branch instructions, Software development tools like assemblers; simulators; cross-compilers, O/P file formats [8 Hrs]

Unit 2

Hardware Features of 8051 microcontroller – port structure, timer and counter features, serial interface logic, interrupt handling, device packaging, Chip technology, Power considerations, Reset, System clock/oscillators, Parallel I/O, Timers, Interrupts, Serial I/O [08 Hrs]

Unit 3

8 bit Microprocessor and Microcontroller architecture, comparison, advantages and applications of Harward and Von Neumann architecture, RISC and CISC comparison. Definition of embedded system and its characteristics, Role of microcontroller in embedded System. Limitation of 8 bit microcontrollers, Study of RS232, RS485, I2C, and SPI protocols [6 Hrs]

Unit 4

PIC Microcontrollers and Instruction Set: PIC Micro-controllers – overview, PIC18F architecture, file selection register, Memory organization, Addressing modes, Instruction set, interrupt handling. Introduction to high performance microcontrollers: performance improvement to maximize flexibility of application, and minimize cost through elimination of external components over 8-bit microcontrollers, application areas for high-performance microcontrollers [06 Hrs]

Unit 5

MSP 430 architectural features, PWM generation UART, Interfacing of switches, LED, LCD, Keypad, Interfacing serial port, ADC, RTC with I2C and EEPROM with SPI. [08 Hrs]

Unit 6

Case studies with PIC, Design of DAS system, Design of frequency counter with display on LCD, Design of Digital Multimeter, Design of DC Motor control using PWM

[06 Hrs]

Text Books:

- Mazidi, "8051 microcontroller & embedded system" 3rd Edition, Pearson
- Mazidi, "PIC microcontroller & embedded system" 3rd Edition, Pearson

Integrated Circuits and Applications

Teaching Scheme:

Lectures: 3 hrs/week

Examination Scheme:

T1 and T2-20 marks each

End-Sem Exam: 60 marks

Course outcomes:

At the end of this course students will demonstrate the ability to

1. Design the linear and non-linear applications of Op-Amp.
2. Compare the working of multivibrators using IC 555 and Op-Amp
3. Classify and comprehend the working principle of data converters.
4. Understand the function of application specific ICs such as Voltage regulators, PLL and its application in communication.

Unit 1

Op-Amp Fundamentals: Op-Amp parameters Circuits with resistive feedback: Concept of feedback & their types, Inverting & non inverting configurations, current to voltage converters, voltage to current converters, summing amplifier, difference amplifier, instrumentation amplifier.

[08 Hrs]

Unit 2

Active Filters: Transfer Function, First order active filters, Standard second order responses, KRC filters, Biquad Filters, audio Filter applications, Sensitivity [06 Hrs]

Unit 3

Non-linear circuits: Schmitt trigger, Voltage comparators, comparator applications, precision rectifiers, analog switches, peak detectors, sample & hold circuits, Integrators & differentiators, log/antilog amplifiers. [08 Hrs]

Unit 4

Signal Generators: Sine wave generators, Multi vibrators, Monolithic timers, Triangular wave generators, Saw tooth generators, V to F and F to V converters, function generator IC [06 Hrs]

Unit 5

D-A and A-D Converters & regulators: Performance specifications, D-A conversion techniques, A-D Conversion techniques, single chip implementation of DAC and ADC. Performance specifications of regulators, linear regulators, modifications for variable voltage, current boost & protection circuits [06 Hrs]

Unit 6

Phase Locked Loops & multipliers: Block diagram of PLL free running frequency, lock range, capture range and Sample circuits for each block. Applications of PLL - Frequency synthesizer FM demodulator, AM demodulator, FSK demodulator, Analog multiplier, Multiplier IC [06 Hrs]

Text Books:

- Ramakant A Gayakwad, "Op-Amps and Linear Integrated Circuits", PHI, 4th edition
- D.Roy Choudhary, Shail Jain, "Linear Integrated Circuits", New Age Int, 4th Edition

Reference Books:

Analog Communication Systems Laboratory

Teaching Scheme

Practical: 2 hrs/week

Examination Scheme

Continuous Evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Observe and analyze the function of different modulators and demodulators of Amplitude and angle modulated systems.
2. Observe and analyze multiplexing systems such as FDM, TDM and QAM.
3. Compare different communication systems by analyzing in time and frequency domain using oscilloscope and spectrum analyzer.

List of Practicals:

1. Fourier analysis & synthesis using hardware & software.
2. DSB-FC Amplitude Modulation and demodulation.
3. DSB-SC modulation and demodulation.
4. Frequency Division Multiplexing and De-multiplexing
5. Quadrature Amplitude Modulation and Demodulation.
6. Study of Ceramic bandpass filter characteristics.
7. SSB modulation and Demodulation.
8. Time Division Multiplexing and De-multiplexing.
9. Frequency Modulation using reactance modulator, computation of modulation index.
10. Study of phase modulator.

Micro-controllers and Applications Laboratory

Teaching Scheme:

Practical: 2 hrs/week

Examination Scheme:

Continuous evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Understand and apply the fundamentals of assembly level programming of microprocessors and microcontroller.
2. Work with microcontroller real time interfaces including GPIO, serial ports, digital-to-analog converters and analog-to-digital converters.

3. Analyze problems and apply a combination of hardware and software to address the problem.

List of Practicals:

Based on 8051 and PIC micro-controller mini-cards/kits by downloading the binary file in flash memory:

1. Assignment exploiting the various addressing modes for accessing internal as well as external memory and unconditional/conditional branch, loop control instructions.
2. Stack and Stack arithmetic operations, Subroutines and parameter passing via register, stack.
3. Timers and its applications , PWM generation
4. Serial Communication
5. Interfacing – Push buttons LEDs Key Matrix Seven segment display LCD
ADC/DAC Stepper motor

Integrated Circuits and Applications Laboratory

Teaching Scheme:

Practical: 2 hrs/week

Examination Scheme:

Continuous evaluation: 40 marks

Exam: 60 Marks

Laboratory Outcomes:

At the end of the laboratory work, students will demonstrate the ability to:

1. Analyze and design various applications of Op-Amp.
2. Design and construct waveform generation circuits.
3. Design timer and data converter circuits using op amps.
4. Design a PLL circuit and study special purpose ICs.

List of Practicals:

1. Op-amp applications-I: Integrator, Differentiators.
2. Op-amp applications-II: Comparator (LM 339), Schmitt trigger.
3. Design build and test Precision rectifier.
4. Design, Build and Test a Square wave generator using op-amp.
5. Study of function generator IC8038.
6. Design, build and test different types DAC & study ADC IC.
7. To study the operation of IC 565 as PLL (Measurement of lock range, capture range & one application).
